🎓 EDUCATION

National Autonomous University of Mexico

Expected Jun 2022

Bachelor's degree in Data Science

GPA: 3.7/4.0

- **Relevant Coursework:** Probability and Statistics, Relational Databases, Concurrent Programming, Discrete Mathematics, Calculus I-IV, Linear Algebra I and II, Advanced Mathematics for Physics.
- **Clubs:** Competitive Programming Club "Pu++".

👛 EXPERIENCE

High School Intern [↗](#)

Jun-Jul 2016

Joint Research Centre on Sustainable Chemistry UAEMex-UNAM

State of Mexico, Mexico

- Classified nanoparticles using electron microscope images using descriptive statistics with matlab.
- Learned how an electron microscope works while working with the lead scientist to take the images.

📚 TECHNICAL SKILLS

Programming Languages: Python, PostgreSQL, C++, JavaScript, CSS, HTML

Libraries: Numpy, SciPy, Pandas, Matplotlib, Scikit Learn, Keras, PyTorch, Selenium, BeautifulSoup, HighCharts

Frameworks: Flask, CUDA, Bootstrap, OpenFrameworks

Tools: GitHub, Google Colab, VS Code, Overleaf, Heroku

Languages: Spanish(Native), English(C1), French(Beginner)

🔧 PROJECTS

[COVID-19 Tracker](#) | Pandas, PyGithub, HighCharts, Flask, Heroku

Aug 2020

- Launched **web app** that provides **daily updates** about COVID-19 for over 150 countries.
- **Several charts** available for each country (total cases, daily new cases,...).
- Created **custom API**, data merged from different sources with automatic daily updates.

[Boat Detection Using Satellite Images](#) | Kaggle, Pandas, Scikit Learn, PyTorch

Jul 2020

- Trained Convolutional Neural Network for **image classification** using LeNet5 architecture.
- More than **40,000 satellite images** from San Francisco Bay Area.
- Analyzed the **tradeoff between precision and sensitivity**, obtaining 97% precision and 90% sensitivity on validation data by modifying hyperparameters.

[Magnetic Pendulum Simulation](#) | CUDA, C++ Threads

Jul 2019

A magnetic pendulum is a chaotic system; one way to describe such a system involves solving a differential equation for every point in a $n \times n$ grid.

- Implemented naive solution using **concurrency** with **C++ Threads (CPU)**.
- Solved problem using **parallelism** with **CUDA (GPU)**.
- Reduced time complexity from $O(n^2)$ in CPU to $O(1)$ in GPU.

[Schrödinger Equation Numerical Solution](#) | C++

Nov 2019

The double slit experiment is about trying to predict how particles behave at a subatomic level.

In this project Schrödinger equation was used to simulate such experiment in a $n \times n$ grid.

- Implemented **RK4 Algorithm** to solve 2D Schrödinger equation.
- Reduced time complexity from $O(n^6)$ using naive approach to $O(n^3)$.
- Program generated **interference pattern** similar to experimental one.

🏆 ACHIEVEMENTS

Contestant [↗](#)

Nov 2020

ACM-ICPC Grand Prize of Mexico 2020 (Top 20%)

Virtual

First Place [↗](#)

Aug 2016

XXVII State of Mexico Physics Olympiad

State of Mexico, Mexico
